Subject: Village of St. Bernard Landfill  
MP-10 Contingency Probe Monitoring Results, July 25, 2017

Dear Ms. Buchanan:

Enclosed please find the results of the contingency gas monitoring performed at MP-10 on behalf of the Village of St. Bernard at the closed St. Bernard Landfill on July 25, 2017.

MP-10 had a sustained reading of 54.9 percent combustible gas. The verification reading had a sustained reading of 53.5 percent. Contingency monitoring will therefore continue to be implemented for MP-10.

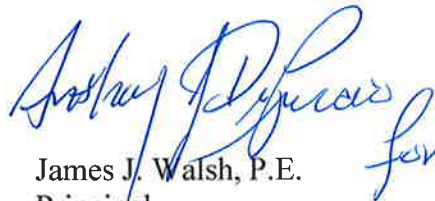

Following the initial and verification sampling for this contingency monitoring event, MP-10 was pumped for 30 minutes, at a rate of approximately 550 cc/min., using the GEM 5000. Approximately 25 casing volumes were removed from MP-10 and the combustible gas concentration was 3.4 percent. The falling methane concentration during the 30 minute purge indicates that the elevated concentration of methane is present in a small area, i.e. only a small volume of soil gas with an elevated concentration of methane is present.

Should you have any questions or comments, please contact the undersigned.

Sincerely,

Randall C. Mills, P.G.
